CLAIMS

WHAT IS CLAIMED IS:

5 1. A method comprising:

finding a correlation between a first statement and a previous statement; predicting a second statement based on the previous statement; and retrieving at least one page from a database based on the second statement.

10 2. The method of claim 1, wherein the retrieving further comprises:

retrieving the at least one page asynchronously from executing the first statement against the database; and

storing the at least one page in a cache.

- 3. The method of claim 1, wherein the finding the correlation further comprises: finding a host variable in a history that matches the host variable in the first statement.
 - 4. The method of claim 3, wherein the previous statement is stored in the history.

5. The method of claim 3, wherein the predicting further comprises:

finding the second statement in the history, wherein the second statement followed the previous statement in time.

25 6. An apparatus comprising:

20

means for finding a correlation between a first statement and a previous statement, wherein the previous statement is stored in a history of a plurality of statements;

means for predicting a second statement based on the previous statement; and means for retrieving at least one page from a database based on the second statement.

- 7. The apparatus of claim 6, further comprising:
 means for saving the first statement in the history.
- 8. The apparatus of claim 6, wherein the means for retrieving further comprises:

 means for retrieving the at least one page asynchronously from executing the first statement against the database; and

 means for storing the at least one page in a cache.
- 10 9. The apparatus of claim 8, further comprising:

means for executing a next statement against the cache, wherein the next statement follows the first statement in time, and wherein a host variable in the next statement matches the host variable in the second statement.

15 10. The apparatus of claim 6, wherein the means for finding the correlation further comprises:

means for finding a host variable in the history that matches the host variable in the first statement.

20 11. A signal-bearing medium encoded with instructions, wherein the instructions when executed comprise:

finding a correlation between a first statement and a previous statement, wherein the previous statement is stored in a history of a plurality of statements;

predicting a second statement based on the previous statement;

- executing the first statement against a database; and retrieving at least one page from the database based on the second statement.
 - 12. The signal-bearing medium of claim 11, wherein the retrieving further comprises: retrieving the at least one page asynchronously from the executing the first statement.

30

- 13. The signal-bearing medium of claim 11, further comprising: storing the at least one page in a cache.
- 14. The signal-bearing medium of claim 13, further comprising:

5 executing a next statement against the cache, wherein the next statement follows the first statement in time, and wherein a host variable in the next statement matches the host variable in the second statement.

15. The signal-bearing medium of claim 11, wherein the finding the correlation further comprises:

finding a host variable in the history that matches the host variable in the first statement.

16. A server comprising:

a processor; and

a storage device encoded with instructions, wherein the instructions when executed on the processor comprise:

finding a correlation between a first statement and a previous statement, wherein the previous statement is stored in a history of a plurality of statements, and wherein the finding the correlation further comprises finding a host variable in a history that matches the host variable in the first statement,

predicting a second statement based on the previous statement, executing the first statement against the database, and retrieving at least one page from a database based on the second statement.

25

20

17. The server of claim 16, wherein the retrieving further comprises:

retrieving the at least one page asynchronously from the executing the first statement.

30 18. The server of claim 16, wherein the instructions further comprise: storing the at least one page in a cache.

19. The server of claim 18, wherein the instructions further comprise:

executing a next statement against the cache, wherein the next statement follows the first statement in time, and wherein the host variable in the next statement matches the host variable in the second statement.

20. The server of claim 16, wherein the finding further comprises:

finding the previous statement, wherein the previous statement is associated with a same job as the first statement.
